

Education

Enabling Teachers and Students to Communicate Even Between Remote Locations

This system actively connects our Nagoya and Shizuoka Branches.

Mr. Sakakibara, Manager
Ohara Accounting School
Nagoya Ohara Gakuen Colleges

Installed System

- HD Visual Communications Unit (KX-VC500 + Boundary Microphone) ... 2 Units
- HD Integrated Camera (AW-HE100) ... 1 Unit
- Full-HD Plasma Display ... 1 Unit
- LCD HDTV ... 1 Unit

Motivation for Installation

Students need to attend lectures to acquire official certification. In the past, however, we sometimes couldn't hold certain lectures because there weren't enough students attending. On the other hand, DVD and Internet training sessions tend to be one-sided, and instructors couldn't conduct their lessons while making sure that all of the students understood the content. Countermeasures were also needed to offer a uniform level of lectures to each class in order to maintain a high passing rate. As a result, we began to consider introducing a system where we could deliver lectures to various schools in real-time while communicating with the students by providing live question-and-answer sessions.

System Selection Points

- The ability for teachers and students to conduct real-time communication (to confirm student understanding, ask questions, etc.)
- Clear confirmation of written blackboard content
- No complicated operation that would interrupt class progress

Customer Information

Nagoya Ohara Gakuen is a Japanese educational corporation that conducts a wide range of educational training, with a focus on providing lectures to help students acquire official certification.

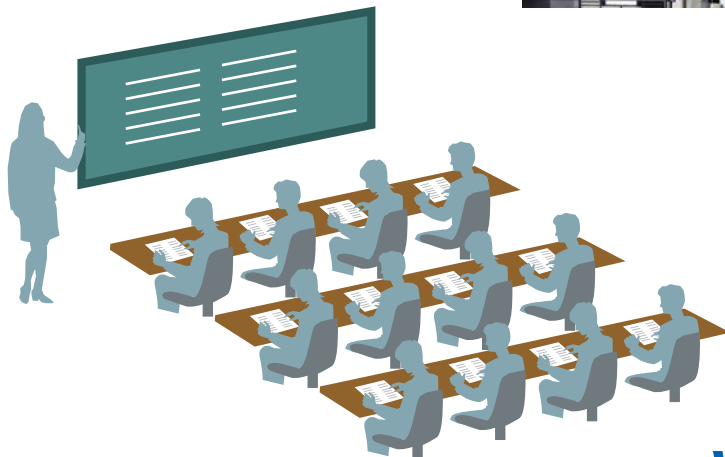

System Configuration and Operation

Nagoya Branch

The teacher can aim the camera as desired by remote control.

Lectures proceed and questions are immediately fielded while checking conditions at the Shizuoka Branch on the monitor.

VPN

(KX-VC500 + Boundary Microphone)

Shizuoka Branch

- Lessons are able to proceed as usual.
- Questions can also be immediately fielded.

(KX-VC500 + Boundary Microphone)

Installation Effect

Achieving Reliable Communication with Efficient Operation

We can now conduct lessons with clear question-and-answer sessions in real-time, even for remote locations. We can also provide lectures to small groups of students. In addition, we have reduced the cost of business trips for our lecturers, which used to be a considerable problem.
