Smooth, Timely Communication Between Distant Offices

Fukuoka Head Office

Tokyo Sales Office

Responding quickly to market issues even though development/production and sales sites are separated.

Mr. Shirai, President and CEO
Acta Co., Ltd.

Installed System

- HD Visual Communications Unit (KX-VC500 + Boundary Microphone) ... 2 Units
- HD Camcorder ... 2 Units
- Full-HD Plasma TV ... 2 Units

Motivation for Installation

Because the development and production facilities and sales offices are separated, communication between them was time-consuming and costly, and it was difficult to hold meetings or exchange opinions easily. We tried installing a system that used the Internet and a web camera, but the image quality was poor. It wasn't at the level where we could use it for examining detailed product information such as surface and cross-sectional processing. Also, the sound quality was poor, and calls were being interrupted mid-conversation, so we started considering a new system based on the following points.

System Selection Points

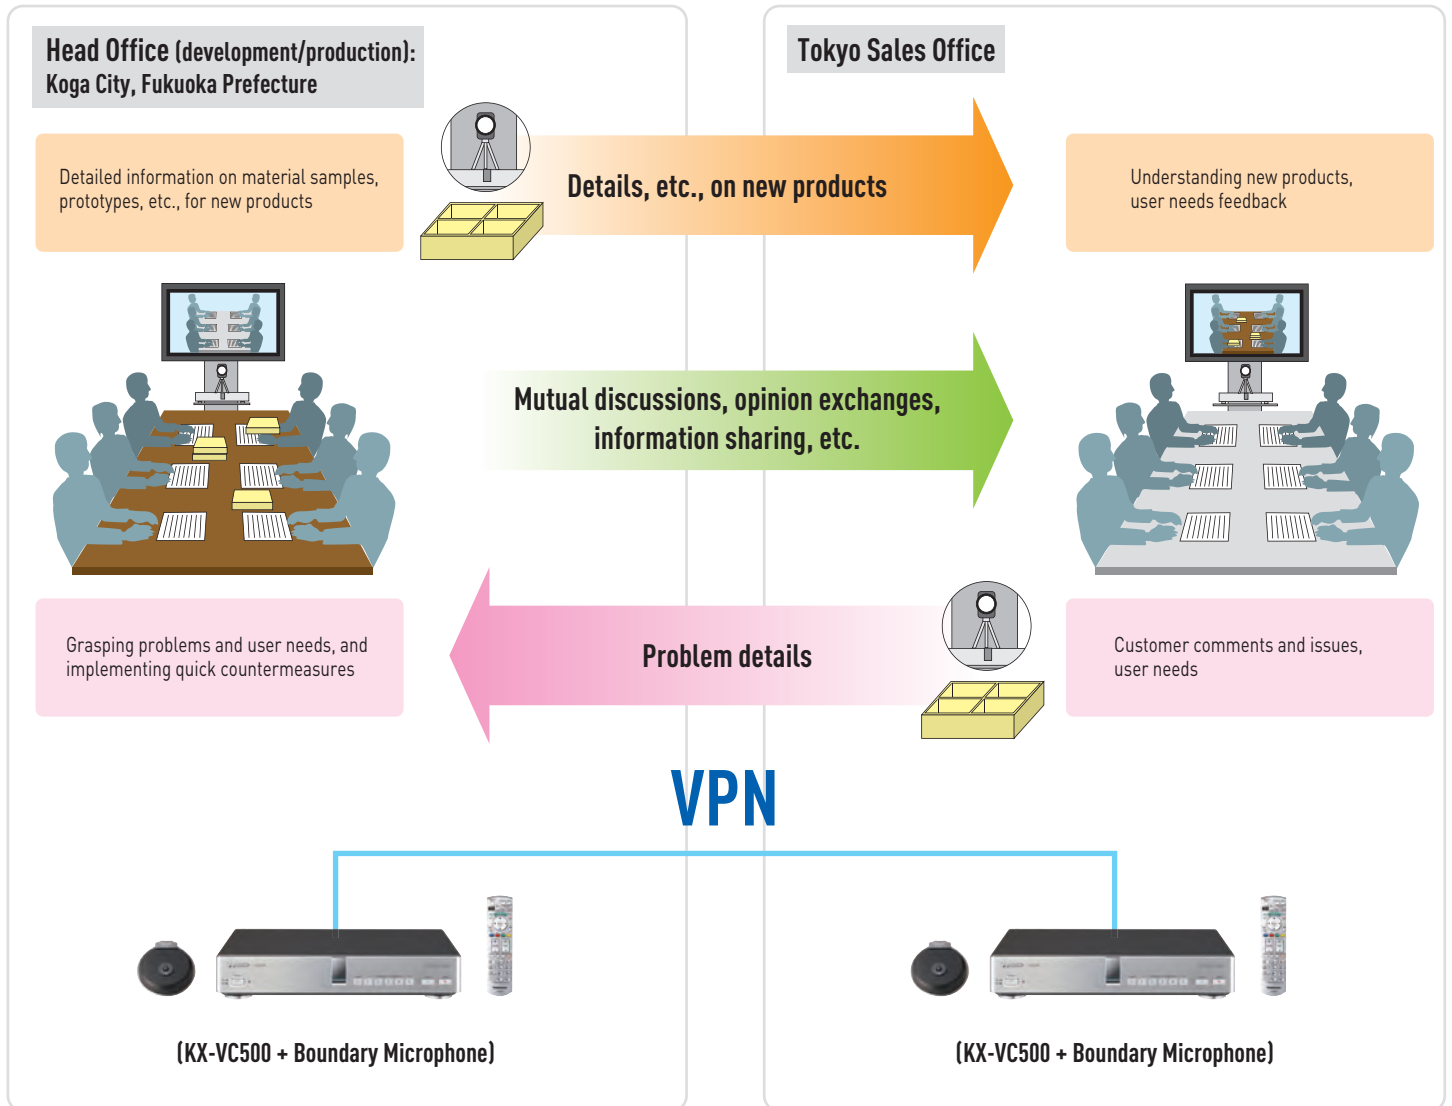

- A level of image quality that shows the product colours, textures, and realistic appearance.
- Lifelike sound quality for natural, 2-way conversations without interruptions.
- High cost-performance considering that the system meets high-level demands for image and sound quality.

Customer Information

ACTA Co., Inc. is a comprehensive manufacturer of food containers based in Fukuoka, Japan.

System Configuration and Operation

Installation Effect

Detailed information is shared among offices, and problem-solving is quickly implemented.

Thanks to HD image quality that shows even subtle details, like the degree of a product's cross-sectional processing, and lifelike sound that isn't interrupted, we can hold meetings with people in distant locations as if we were all in the same room. The system has a wide range of uses, including product planning, development and management and sales meetings.

I think that even more than the effect of reducing the costs and time related to physical movement, the ease with which we can connect and communicate has had a major effect on our product development and rapid problem-solving.

Installed Models

HD Visual Communications Unit
KX-VC500
(Boundary Microphone purchased separately)

HD Camcorder

Full-HD Plasma TV
